CodeCrafters

Build your own grep

Learn about regex syntax: character classes, quantifiers and more

Start Building

Regular expressions (Regexes, for short) are patterns used to match character combinations in strings. In this challenge you'll build your own implementation of grep, a CLI tool for searching using Regexes.

Along the way you'll learn about Regex syntax, character classes, quantifiers and more.

Stages

Match a literal character	VERY EASY
Match digits	VERY EASY
Match alphanumeric characters	VERY EASY
Positive Character Groups	MEDIUM
Negative Character Groups	MEDIUM
Combining Character Classes	MEDIUM
Start of string anchor	MEDIUM
End of string anchor	MEDIUM
Match one or more times	HARD
Match zero or one times	HARD
Wildcard	MEDIUM
Alternation	HARD

Backreferences

Single Backreference	HARD
Multiple Backreferences	MEDIUM
Nested Backreferences	HARD

> There are few sites I like as much that have a step by step guide. The real-time feedback is so good, it's creepy!

Ananthalakshmi Sankar
Automation Engineer at Apple

> I think the instant feedback right there in the git push is really cool. Didn't even know that was possible!

Patrick Burris
Senior Software Developer, CenturyLink

Programming challenges for seasoned developers.
